DETAILED ACTION

Election/Restriction

1. Applicants selects group I from claims 1-31 for examination without traverse in paper no. 5 (11/06/03).

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-31 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

After carefully studied the present application, the Examiner believes that the entire application is about applying an RF signal (RF/IN) at a single end of a mixer in order to obtain IF signals at the outputs as IF+ and IF- (Figs. 8-14). The process is known in the art as “downconverting” not “upconverting”; and an apparatus or a device doing this process should be called “a downconverter” instead of “an upconverter” as claiming throughout the specifications and claim languages. Because IF signals or intermediate frequency signals are signals having lower frequency than the RF signals or radio frequency signals, the device can not be referred to as “an upconverter” for creating an opposite meaning of what it exactly does. Please refer to the attached Tiller reference (col. 1/lines 5-19, Fig. 4, and col. 5/lines 7-13) for the Examiner’s basis

Art Unit: 2685

of support/statement. The entire application including the claim languages should be revised or corrected properly.

The Examiner holds the art rejection process until this matter can be resolving appropriately later on because of conflicting concepts of the present application as stated and of the claim languages, as for claims 1, 7, 13, 20, 29, and 31 call for an upconverter providing an output at a higher frequency than the input signal, but in fact, the input signal is RF/IN which eventually has a higher frequency than the output IF signals.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

Tiller (US Patent 6,529,721 B1) discloses a low noise mixer with a same technique as the present application.

Bertonis et al. (US Patent 6,625,222 B1), Dougherty et al. (US Patent 5,465,420), and White et al. (US Patent 6,631,257 B1) disclose mixers related to upconverting and DC control signals.
